Professional Summary

Bilingual (English/Spanish) Senior Backend Engineer with 15+ years of experience leading backend development — from greenfield builds to evolving existing systems — with deep expertise in Java, Spring Boot, AWS, and Kubernetes across microservices, distributed systems, and cloud-native architectures. Recently expanded into AI-assisted development, building personal automation tools with Claude Code to parse emails and extract structured financial data.

Technical Skills

Languages & Frameworks:

Java (8–25), Spring, Spring Boot, Python, Bash/Zsh, React

Cloud & DevOps:

AWS (S3, EC2, Lambda, DynamoDB, SQS, SNS, CloudWatch), Docker, Kubernetes, Terraform

Databases:

PostgreSQL, MySQL, DynamoDB, Redis, Cassandra

Messaging & APIs

Kafka, REST/JSON, SOAP/XML, OpenAPI, gRPC, Protocol Buffers

CI/CD & Monitoring:

GitHub Actions, GitLab, Jenkins, CircleCI, Datadog

Architecture:

Microservices, Cloud-native, Hexagonal Architecture

Soft Skills

Mentorship & Leadership

Skilled at guiding junior engineers and cross-functional teams, fostering growth while driving technical excellence.

Communication & Precision

Bilingual English–Spanish communicator with strong attention to detail, ensuring clarity, accuracy, and high-quality outcomes across multicultural teams.

Professional Experience

Lead Backend Developer (contractor) – [84.51°](#) via SunnyData

Dec 2025 – Now

- Provide production support for platform access issues.
- Support the migration of users from Salesforce to EMP (the internal user management system), including content migrations driven by user account changes.
- Stack: Java, Spring, Spring Boot, PostgreSQL, RabbitMQ, Salesforce, Datadog.

Freelance International Technical Interviewer – [flocareer.com](#)

Sep 2025 – Now

- Conduct in-depth international technical interviews for Java Backend roles, assessing candidates' problem-solving and system design skills.
- Evaluate practical knowledge of technologies like Spring Boot, REST APIs, microservices, and cloud-native architectures.

Senior Java Developer – scoutt.co

Sep 2024 – Jul 2025

- Led backend development for a greenfield platform that allows real-time formation of software engineering teams with visibility into skills, productivity, and availability.
- Designed, developed, and deployed microservices with hexagonal architecture in Java 21 and Spring Boot, Docker, PostgreSQL, Redis, and Kubernetes.
- Integrated a microservice with Google Gemini API via REST.
- Implemented CI/CD pipelines with GitHub Actions.
- Stack: Java 21, Spring, Spring Boot, JUnit 5, Mockito, PostgreSQL, Redis, GCP, Docker, Kubernetes, GitHub Actions.

Career Break (Health & Well-being)

Jul 2023 – Aug 2024

Software Java Backend Developer (Contract) – Wisetack via Svitla Systems

Jul 2022 – Jun 2023

- Contributed to the borrower experience team of a BNPL micro-lending platform.
- Led the design, development, and testing of the “First Month Prepayment” feature to help reduce delinquency rates.
- Participated in the redesign of part of the UI flow building React components from scratch in TypeScript.
- Mentored junior developers and trained QA engineers in monitoring and log analysis.
- Stack: Java 11, Python, AWS, React, Terraform, Datadog, OpenAPI.

Payments Software Engineer – Bitso

Mar 2022 – May 2022

- Joined the DeFi Squad to onboard new fiat and crypto currencies into Bitso’s payment ramps.
- Ensured transactional accuracy and resolved customer-facing payment issues.
- Stack: Java 17, Spring, Spring Boot, Redis, PostgreSQL, Docker, AWS, Kubernetes.

Senior Software Engineer (Contract) – Venmo via Taller Technologies

Apr 2021 – Nov 2021

- Built Kafka ingestion pipelines and gRPC services for Venmo’s PaaS Ledger team.
- Led migration from Jenkins to GitHub Actions and created Docker-based local development environments.
- Stack: Java 11, Spring, Kafka, Cassandra.

Senior Software Engineer – Spark Digital

Sep 2019 – Mar 2021

- Column 6: Maintained and enhanced ad-tech backend systems across multiple subsystems including dashboards, job runners, and reporting engines.
- W. W. Norton & Company - Backend Engineer for the Norton e-reader platform re-architecture. Analyzed and documented legacy monolith PHP codebase hitting a MongoDB in order to assess how much of it could be reused and how. Developed and unit tested the foundations of a docker-ready RESTful PHP Adapter written in Lumen framework, acting as proxy between the new backend API in NestJS.
- MediaMath: Designed and delivered Spring Boot services to process offline audience data files replacing a legacy Go application. Recognized as SME.

Senior Software Engineer – Overactive

Feb 2019 – Aug 2019

- Migrated a legacy .NET monolith into Spring Boot microservices deployed in AWS for Curantis Solutions.
- Contributed to backend systems supporting palliative care management.

Senior Java Developer (Contract) – Sprint via ProKarma

Nov 2017 – Jan 2019

- Built and maintained SOAP APIs in a SAFe scrum team servicing Sprint’s multi-layer backend.
- Used Java 8 and JDBC to interact with Oracle DB in a multi-vendor environment.

Backend Developer – avantrip.com

Jun 2016 – Oct 2017

- Led backend integration with Amadeus for OTA’s airline ticket system.
- Contributed to Docker adoption and prototyped core components for production use.

Independent Consultant / Trainer

Aug 2012 – Jun 2016

- Taught Java programming at Da Vinci and Educación IT academies.
- Delivered in-company English training and translated technical documents (EN<>ES).

Education

Degree in English-Spanish Technical, Scientific, and Literary Translation – CAFI (Centro Académico de Formación en Idiomas) – 2008-2014.

B.Sc. in Computer Science (60% complete) – UBA (University of Buenos Aires) – 1998 – 2005.

Certifications

Certified ScrumMaster (CSM). ScrumAlliance, license 759690.
